

I want to make changes to quite a few of the screens but our current focus is a UI specific to Redaction processing tasks. A user who performs redaction would automatically have requests appearing on his/her MY TASKS page through the task assignment process. There are actually several paths that would result in the task landing on a redactor's MY TASKS list, but for the scope of our current objective those are not relevant.

Beginning with the items on the MY TASKS list above, we see that this redactor has record 2026-0003 ready for redaction. It also has a task for Build Redaction template. Let's begin with where we land when we open the Redaction task.

You see above where the redactor lands when clicking to open the redaction task. No user would have any clue what to do from here. What is needed to perform redaction is under the Records and under Search Documents. I will click on Records.

Because there seems to be no interface for the prior stage, Record Search, it was not possible to process the record properly. I manually uploaded a document so that we can walk through the screens.

Review side-by-side

Clicking redact takes me to a screen that is what could be used at the basis for building a UI for redaction. It is where a redactor should land when clicking on a redaction task from his MY TASKS page. The ui for redaction needs as much space as possible so when it opens, it should cover the navigation pane on the left. Also, you see a button that says Find exempt content (AI). The process triggered by that button should begin automatically when the user clicks the task in the my task list, as it takes way less than one second. But, it's still a good idea to have the button in case the redactor deletes the AI SUGGESTED REDACTIONS. The buttons should be smaller and at the top. Now I will click to Find exempt content (AI).

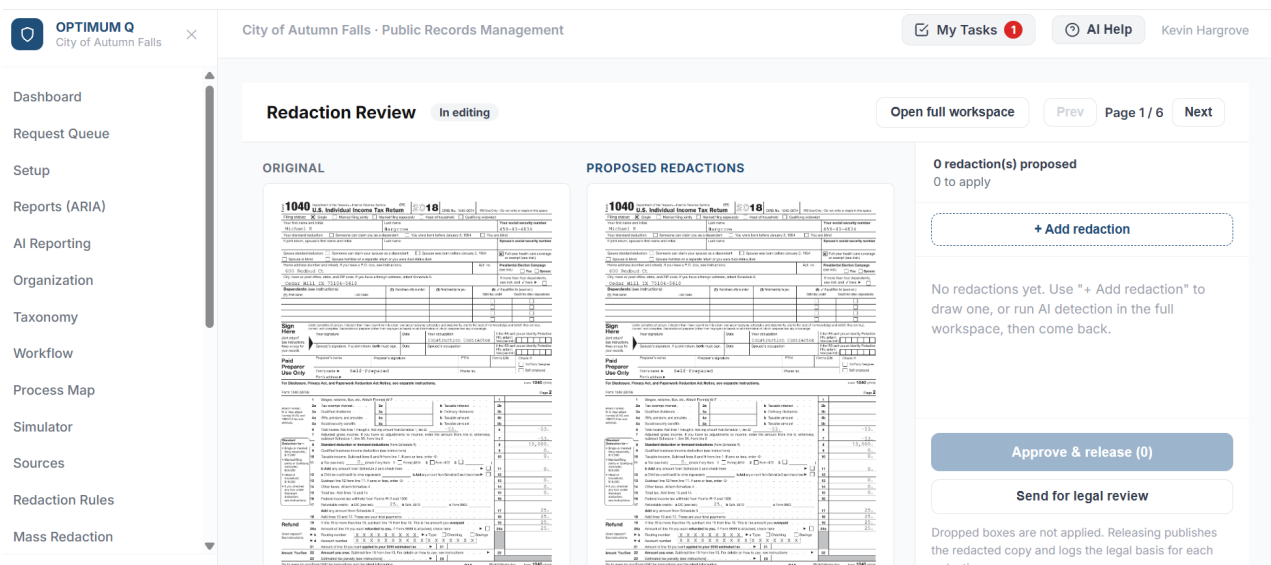

You see that AI suggested information to be redaction by covering with a shade of orange. You see that under the button there is now information related to what is shaded. The list needs to be visible. It should show each redacted item, and under it the “reason”, then the next item is shown, and its reason. The Rules for new boxes should not be visible at this point, as they are related to manual redaction or edit. The apply redaction button is too large but it belongs in that general area. Space should be optimized to allow for several redacted items on the list to be visible, and scroll to view more if there are a lot of redacted items. Below is a screenshot as I scroll through the list of AI suggestions. It has the right content but the design is bad. It has Accept and Reject buttons for each individual suggested redaction

- ▲ Instead of buttons for each item, the list should have a checkbox by each to select individual items for applying redaction, and at the top a check box to select all, next to it a small button to apply selected redactions.
- ▼

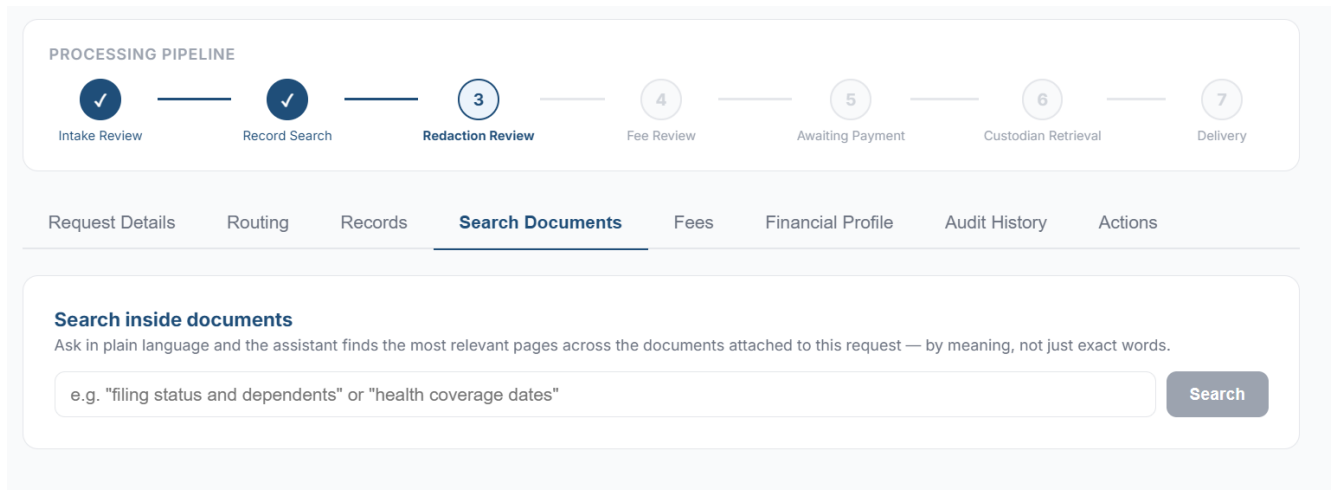

Notice at the bottom there is a button to view side by side. This would actually be best probably centered above the view of the document. I will click to toggle side by side view.

Side by side view is simply a before unredacted vs current view of the document with whatever is still showing as redactions, regardless of whether AI suggestions have been deleted and manually selected redactions added. The view is informational, and because documents appear side by side, no buttons should be visible other than “Return to Single Page View” (currently the Open Full Workspace button returns to the original view, but the label should be changed). Notice on this view is a button to Add Redaction. Also, approve and release, and send for legal review. None of that should exist in this view. On the main view the buttons and content on the right related to selection of AI suggestion redaction should display in a sequence of processing. First, select which AI suggested redactions to apply. It might be best to show the list and apply selected button and the apply button in a frame that has two boxes below, that remain small with only a label for the one below the AI suggested redaction box. The label would say Manual Redaction. When the Apply button in the AI suggested redaction box is clicked the box shrinks to the size of lower two boxes and has a label that says AI Redaction. The user can click the second or third box. Clicking either would cause the box to expand. By clicking Manual redaction the user would see the Add Redaction feature currently displayed on the side by side view. When adding a redaction the user selects text and when that selection is set in place the “Rule for new boxes” feature should pop up allowing the user to select the legal justification associated with the area he just selected for redaction. A button at the bottom of that expanded Manual Redaction box would say “Apply Manual Redactions” and when that happened the box shrinks again. Actually I’m struggling at the moment to come up with the description for the bottom box, but clicking would expand the box and under it would be the button to Generate Reusable Template. It behaves the same as the Save as Reusable Template currently on the right side pane of the single form view. The Approve and Release button would be in this box as well as the Send for Legal Review button. Note the arrows at the top corner and the indicator of being on page 1 of 6...that would basically be the same on the new Redaction UI.

Recall that when we clicked the My Tasks link we went to the view below and clicked Record. I’m not clicking Search Documents. This name is very confusing, as one might reasonably think that is where document search is performed, especially when there is nothing anywhere else in the workspace with a name that indicates it’s related to a record search. Clicking Search Documents actually takes the user to a tool that performs semantic search within a document. This feature is supposed to search content within documents attached to the request record. It might also be useful in the record search UI, but for

now lets assume it's only to be used by someone performing redaction. I don't know exactly where to place it...perhaps a button at the top of the single page view in the redaction UI would launch the tool in a small window.

I think this is enough to begin to hone in on a design for Redaction UI. It also give you some insight as to what I consider problematic with the “workspace.”
